In Sandblasting, compressed air or steam is used to project a stream of abrasive particles onto a surface, which commonly includes materials like silica sand. Sandblasters or workers who operate this process are continually exposed to the harmful substance while cleaning sand and irregularities from foundry castings, removing paint etc because the silica sand used in abrasive blasting normally breaks up into fine particles and becomes airborne. Since these silica particles are invisible to the naked eye, workers may not be aware of the risks they are involved in, while performing their daily tasks. This article is about maintaining and improving the sperm count and quality of men. Increased sperm count and quality is vital in the reproductive process. It is essential in emitting a strong sexual presence for a man and is very
